

BESPOKE ENERGY SOLUTIONS

LOWERING COSTS & RAISING EFFICIENCY WITHIN HOMES & BUSINESSES

PRO-FIT ENERGY

HEAT PUMP + SOLAR = LOWER COSTS, HIGHER EFFICIENCY AND A HAPPY HOME

And just so you know...

Products:

Air-Source Heat Pump: 15kW Mastertherm

Solar Thermal System: 20 tube Mastertherm

And we overcame the obstacles...

The space available to install a new system was very small, so PFE ensured the new equipment was the right proportions to fit the space and provide access.

And a little something extra...

PFE fitted a separate electrical meter on the supply to the heat pump, so William can monitor the usage of electricity for the heating and hot water only.

William also benefited from the RENEWABLE HEAT INCENTIVE (RHI).

And so many great options...

- Hot water integration
- Variable underfloor heating control
- Adapts to changes in weather
- Control via mobiles and tablets

William wanted one utility bill and lower running costs.

Pro-Fit Energy (PFE) had been carrying out electrical installation work at William's new build property, when William approached them about lowering his running costs of the property. He was also keen to move to one utility bill, rather than multiple energy providers and bills.

PFE wanted to give William a flexible, efficient and green heating system.

To bring William's heating costs down and run solely on electricity, PFE recommended and installed an air-source heat pump in order to maximise on efficiency and provide a flexible, controllable heating system.

Following the success of the air-source heat pump, William employed PFE to install a Solar Thermal System, reducing William's fuel bills and carbon footprint further by providing his hot water from a renewable source.

William now has an all electric heating system that has cut his costs dramatically.

Some of the benefits PFE's solution provides William:

Intelligence. William can make use of the system's unique control features and he can even use his mobile phone or tablet to control and monitor the system.

Thriftiness. The new heat pump will save William up to 70% on heating costs, reducing his running costs significantly.

Caring. William's heating system has an extremely low environmental footprint, producing significantly lower emissions and using low amounts of energy.

What do you think William?

"The Pro-Fit Energy team were professional throughout and a pleasure to work with. We now have a system that provides us with optimum heating and hot water as and when it's needed throughout the year, and providing cost savings. We are so pleased with the entire installation and service provided by Pro-Fit Energy."

PRO-FIT ENERGY: ESTABLISHED MORE THAN 20 YEARS AGO, WE ARE A FAMILY BUSINESS PROVIDING HIGH-QUALITY, PROFESSIONAL ELECTRICAL SERVICES AND RENEWABLE ENERGY SYSTEMS.
